Log Likelihood, Part 1

To compute the log likelihood, we need to get the ratios and use them to compute a score that will allow us to decide whether a tweet is positive or negative. The higher the ratio, the more positive the word is:

To do inference, you can compute the following:

$$\frac{P(pos)}{P(neq)} \prod_{i=1}^{m} \frac{P(w_i|pos)}{P(w_i|neq)} > 1$$

As \it{m} gets larger, we can get numerical flow issues, so we introduce the \log , which gives you the following equation:

$$\log\left(\tfrac{P(pos)}{P(neg)}\prod_{i=1}^n\tfrac{P(w_i|pos)}{P(w_i|neg)}\right)\Rightarrow\log\tfrac{P(pos)}{P(neg)}+\textstyle\sum_{i=1}^n\log\tfrac{P(w_i|pos)}{P(w_i|neg)}$$

The first component is called the log prior and the second component is the log likelihood. We further introduce λ as follows:

doc: I am happy because I am learning.

$$\lambda(w) = log \frac{P(w|pos)}{P(w|neg)} \\ \lambda(happy) = log \frac{0.09}{0.01} \approx 2.2 \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0.05 | 0}{am | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0}{am | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0}{am | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0}{am | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0}{am | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0}{am | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0}{am | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0}{am | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0}{am | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0}{am | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0}{am | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0}{am | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0}{am | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0}{am | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0}{am | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0}{am | 0.04 | 0} \\ \frac{| 1 | 0.05 | 0}{am | 0.04 | 0} \\ \frac{| 1$$

Having the λ dictionary will help a lot when doing inference.
